

Week Six

By now, his basic facial features have begun to develop. The lenses for his eyes appear, his nostrils start to form, and the openings for his ears are in place. His arms and hands are more than just buds now; one can even see the distinct, though still webbed, fingers and toes. His intestines, pancreas, and other parts of the digestive system are forming, and his brain has already developed into five distinct areas.

Eyes and Ears and Mouth and Nose
