

Week Six

By now, her basic facial features have begun to develop. The lenses for her eyes appear, her nostrils start to form, and the openings for her ears are in place. Her arms and hands are more than just buds now; one can even see the distinct, though still webbed, fingers and toes. Her intestines, pancreas, and other parts of the digestive system are forming, and her brain has already developed into five distinct areas.

Eyes and Ears and Mouth and Nose
