

DEAR PHARMACISTS,

As you may know, the FDA recently made a declaration that the federal government will permit chemical abortion drugs to be dispensed at retail pharmacies. Sadly, the company that you currently work for has opted in to sell chemical abortions under the guise of legitimate healthcare.

We already know that these chemical abortion drugs **endanger** pregnant women because, often-times, a patient will not have received an ultrasound or pregnancy confirmation prior to filling the order, which puts her at risk for undetected ectopic pregnancy. Additionally, rushing to fill these prescriptions without seeing a physician in-person can lead to **permanent infertility** if an Rh-negative mother is not administered RhoGAM.

Below is the full list of potential side effects and / or complications:

- pain, possibly severe
- heavy and/or prolonged bleeding for multiple weeks
- fever
- infection
- incomplete abortion (requiring surgical follow-up)
- nausea and vomiting
- diarrhea
- feeling dizzy or heaving a headache
- short-lasting hot flashes
- hemorrhage
- blood clots
- undetected ectopic pregnancy, which is life-threatening
- **permanent infertility, if an Rh-negative mother is not administered RhoGAM as is done with dangerous “no-test” abortions and telemedicine chemical abortions**
- maternal death

One study had shown that almost 10% of women reported complications and the most common complication was an incomplete abortion.¹ No reliable studies have been conducted in the United States and we are lacking proper data to make informed decisions regarding this product.

Thankfully, there are **alternative resources** that will allow you to provide true healthcare for your patients. Additionally, as a health care provider, you have conscience rights allowing you to refuse to perform, accommodate, or assist with certain health care services on religious or moral grounds.

Standing for Life Together,

X
